A Guide for You and Your Family

Indian Point is a nuclear power energy generation facility, located in Buchanan, New York. It is owned and operated by Entergy Nuclear. The plant is on the east bank of the Hudson River in Westchester County, close to portions of Rockland, Putnam and Orange counties.

Emergency planners in Westchester are well trained and equipped to protect the public in the event of an emergency. For Indian Point, they have developed a comprehensive emergency plan in cooperation with emergency planners from the other three counties, New York State and the Indian Point Energy Center. The plan includes information and procedures for protecting the public in a wide range of possible nuclear emergencies.

Part of the emergency plan includes communicating with the public. The information in this booklet is for you, the people in the communities close to Indian Point. Emergency planners want people to have this information because it will help keep you safe in the unlikely event of an emergency at Indian Point.

You should read this booklet carefully, well in advance of any potential emergency. Discuss it with your family. Fill in your family’s information. Keep this booklet in a safe place for future reference.

Step-by-Step Emergency Planning

As you read this booklet, you’ll be asked to write in your family’s own emergency information. At the end of this step-by-step process, you will have gathered together important information that will keep you and your family safe in an emergency.
Radiological Emergency — an emergency where radioactive materials in significant concentrations escape into the environment. If the concentrations of the materials are high enough, they could be dangerous to one’s health.

Radioactive Release — Introduction or leak of any radioactive materials into the environment.

Incident Levels — The federal government has designated four classifications for incidents at nuclear power plants. Each classification corresponds to the degree of seriousness of an incident. See page 19 for details.

EAS – Emergency Alert System — Specially designated radio and TV stations that will broadcast safety information in the event of an emergency. EAS stations are listed on the opposite page.

Emergency Sirens — There are sirens placed within the 10-mile radius of Indian Point. In the event of an emergency at Indian Point the sirens may sound continuously for 4 minutes.

EPZ — Emergency Planning Zone — The area designated by the federal government within a 10-mile radius of a nuclear power plant for which plans have been put in place to protect people in the event of a radiological emergency.

KI — The chemical symbol for a drug called potassium iodide. KI-potassium iodide comes in the form of tablets and liquid. KI protects only the thyroid gland from just one kind of radiation—radioactive iodide. It can be obtained through your county or municipality and kept on hand in your home. KI is also available over the counter (without a prescription) at local pharmacies. In the event of a nuclear emergency, you could be instructed to swallow a KI-potassium iodide tablet. It should be taken only when directed by public officials.

Protective Action — Any action taken to protect the public’s health in response to an emergency. Protective actions in a radiological emergency could include sheltering in place (staying indoors), evacuating the area and/or swallowing KI-potassium iodide.

Sheltering — Also called “sheltering-in-place.” This is a protective action in which you are instructed to stay indoors with windows and doors tightly shut and all ventilation systems turned off. Under certain circumstances, it is the better way to limit exposure to radioactive materials.

Evacuation — A protective action intended to prevent or reduce exposure to radioactive materials. In an evacuation, you would be instructed to leave your home and go outside of the Emergency Planning Zone to the home of a relative or friend or to a Reception Center. Reception Centers are identified on the map in the middle of this booklet.

Reception Center — A location outside of the Emergency Planning Zone (EPZ) where people who have evacuated can go. You can find your Reception Center on the map in the middle of this booklet.

School Reception Centers — Schools outside of the Emergency Planning Zone where school children are relocated during a radiological emergency. If children are in school during an incident, at the first indication of a problem, they will be taken by bus to a School Reception Center as a precautionary action. Your children will be cared for at these Centers. You can find your children’s School Reception Centers on the map in the middle of this booklet.
How will I know if there’s an emergency at Indian Point?

Siren Alerts
If there is a problem at Indian Point that may require people to take action, the County Executive may decide to sound the emergency sirens. These special sirens are located throughout the 10-mile radius around Indian Point known as the Emergency Planning Zone or EPZ (pg 2).

Siren Testing: The sirens are tested periodically throughout the year. Siren tests are announced in advance through local news media.

Telephone, Cell Phone and E-Mail Notification
In addition to the siren system, officials may use a number of other state-of-the-art communications technologies to alert the public. These include high-speed telephone and e-mail alerting services, including the NY Alert system. NY Alert is a statewide system which requires registering. The telephone alerting service allows residents to input additional numbers that are to be contacted in the event of an emergency. Anyone can sign up for NY Alert online at www.nyalert.gov/

Community Emergency Notification System (CENS)
Westchester County has its own communications system to contact the public directly in case of a large-scale emergency. We can use e-mail, text messaging, and/or phone messages to provide information to you before, during or after a major disaster. This information might include updates about emergency conditions, what to do or where to go. This added effort is intended to supplement — not replace — information you will receive from television, radio, and other sources. It should not replace individual and family emergency planning. To register for Westchester County emergency alerts, go to http://www.westchestergov.com/cens

Tune in for information
If you hear the emergency sirens, tune in your radio and TV to an Emergency Alert System (EAS) station for further information.

Remember: The sounding of the sirens is not a signal to take any actions other than to listen to your radio or TV.

Enter this information here, and then on the Emergency Plan Summary, page 14.
What is the Emergency Planning Zone (EPZ)?

The community emergency planning described in this booklet is for the area within a 10-mile radius of Indian Point, known as the Emergency Planning Zone (EPZ). The federal government set the 10-mile radius as the area requiring emergency plans for protecting health and safety in radiological emergencies.

An emergency at Indian Point could mean that radioactive materials either escaped or could possibly escape from the plant. The goal of emergency planners is to prevent or limit people’s exposure to the radioactive materials.

How will I know if my area is affected during an emergency at Indian Point?

This booklet has been mailed to you because your home or workplace is located in the 10-mile Emergency Planning Zone (EPZ) around the Indian Point Energy Center (see the detailed map in this booklet).

If there is an emergency, you will be given instructions based on your municipality which will be broadcast on EAS radio and television stations.

To find out how far you are from Indian Point and also if you live or work in an area that would be affected in an Indian Point emergency, log on to www.westchestergov.com/IndianPoint.
What is a protective action and what should I do if my community is directed to take protective action?

If there were an emergency at Indian Point, officials might sound the emergency sirens and then use the Emergency Alert System (EAS) to broadcast instructions for people to take “protective actions.” A protective action could direct people in certain communities to stay inside behind closed windows and doors. This action is called “shelter-in-place.” Or people could be directed to leave their community and go to a place outside the Emergency Planning Zone.

The appropriate actions to be taken will depend on conditions at the plant.

Evacuation

Evacuation is one protective action. After evaluating information about the emergency at Indian Point, county officials may direct people in some areas to evacuate and leave the area. The order to evacuate would be given through EAS broadcasts on radio or TV.

People who are directed to evacuate who do not have another place to go can go to a Reception Center. These centers are located in schools outside the Emergency Planning Zone (EPZ).

Safety and public health officials will be present at each center. Medical attention, information about places to stay and other services will also be available. The centers corresponding to your area are found on the detailed map in this booklet.

Evacuation instructions

If you are instructed to evacuate because of an emergency, you should:

• Be certain that your area is one being ordered to evacuate. Do not evacuate unnecessarily.

• If your area is being evacuated, you should arrange to leave as soon as possible by car or by emergency bus. Keep your radio on and your car windows closed and use only recirculating air conditioning or ventilation if your car is so equipped.

• Refer to the Evacuation Supplies Checklist on page 21 for items to help determine what you should bring with you during an evacuation. If you have children in school, they will probably have already been relocated by school authorities. You can pick them up at their School Reception Center which is shown on the map in the middle of this booklet.

• Evacuate to a location outside of the EPZ, using the most timely route. If you do not have another place to go, then go to a Reception Center designated for your area which is shown on the map in this booklet.

• Taking KI is also a protective action that may be ordered. When people are instructed by public officials to evacuate, they will also be instructed to swallow a dose of “KI.” KI is potassium iodide, an over-the-counter medication that can protect only one part of your body—your thyroid—from only one type of radiation, radioactive iodine. Please see page 16 for more details.

Please follow directions carefully. If your area is being evacuated, public officials will make every effort to allow sufficient time to evacuate before there is danger of exposure to radiation. You will have enough time to gather enough personal supplies for three to five days away from home. Consider taking things such as clothing, medication, baby supplies, money and important papers. The checklist on the inside back cover can help you plan these supplies.
Special instructions if there has been a release of radiation from Indian Point:

Please see the “Evacuation Supplies Checklist” on the inside back cover and evacuation route information in the middle of this booklet.

County officials will inform you through announcements on radio and TV stations of a release of radiation from Indian Point and the actions you should take.

People who have evacuated to stay with friends or relatives or to other locations outside of the EPZ should shower and launder their clothes to remove possible contamination. Washing will effectively eliminate contamination. If necessary, you can go to your designated Reception Center to be monitored for contamination and to be decontaminated.

**Staying indoors – “shelter-in-place”**

Sheltering-in-place is another protective action option. This action may be recommended when there is a brief release of radiation from the Indian Point Energy Center. Wind and weather conditions could cause the radiation to pass through the area very quickly. In this scenario, sheltering-in-place inside would provide better protection than driving away in a car. See the box below for shelter instructions.

Sheltering-in-place may also be the preferred action in cases where bad weather (for example a snowstorm) prevents efficient evacuation. Again, if you hear the emergency sirens, turn on your radio or TV to receive Emergency Alert System (EAS) messages with further instructions.

**Shelter-in-place instructions**

If you are instructed to remain indoors (“shelter-in-place”) because of an emergency, you should:

- Keep family and pets inside.
- Close all windows and doors.
- Turn off heaters, air conditioners and any other ventilation systems.
- Extinguish fires in fireplaces and close dampers.
- Stay tuned to the Emergency Alert System (EAS) stations.
- Avoid using telephones, including cell phones, to prevent overloading the system and interfering with emergency use.
If students and school personnel must be relocated as a precautionary measure, or evacuated immediately for their safety, busses will take them to School Reception Centers. The listing below shows the School Reception Center (SRC) to which students from each EPZ school would be taken. The numbers in the blue circles correspond to the School Reception Center locations marked on the map in the middle of this Pull-out section.

### Day Care Facilities

Parents of children attending Day Care Facilities or Nursery Schools in the Indian Point Emergency Planning Zone (EPZ) should contact that facility or schools administration to learn more about their individual emergency plans.

Day care or Nursery School Administrators in the Westchester EPZ who need radiological planning information or guidance should contact the Westchester County Office of Emergency Management at 1-800-942-1452.

If you do not have your own transportation to leave the area, you can ride one of the buses provided to take you to a General Population Reception Center or you may arrange a ride with a neighbor. Following is a list of emergency bus routes and stops in Westchester County. If residents of your planning area are advised to evacuate, locate the nearest bus stop. You will be advised over the radio when to go to your bus stop or wait outside your home if your route has stops at private residences, on demand.

Emergency Plan Summary

This summary page is your family's personal Emergency Plan. Fill out this page carefully with your information. Discuss this booklet with your family and keep it in a safe, easy-to-find place for future reference. Remember:

• If you hear emergency sirens sound continuously for 4 minutes, turn to your Emergency Alert System (EAS) radio or TV station for further instructions.
• EAS broadcasts may instruct you to stay indoors with windows and doors shut, a protective action called “sheltering-in-place.”
• Or, you may be instructed, depending on where you live, to evacuate. Do not evacuate unless your area is specifically instructed to do so.
• You may be instructed by safety officials on EAS broadcasts to swallow a KI-potassium iodide pill. Know where you have stored your supply, and take it with you if you are evacuated.

1. My Emergency Alert System (EAS) stations are:
   AM radio_________________ FM radio_________________ TV____________________

2. My Reception Center is _____________________________________________________

3. My recommended route to get to my Reception Center is
   __________________________________________________________________________
   __________________________________________________________________________

   __________________   __________________________________________________________
   __________________   __________________________________________________________

5. I can obtain KI-potassium iodide by calling my county’s Office of Emergency Management at 1-800-942-1452.
   I keep my supply of KI-potassium iodide (where) ________________________________

Other Information

If an emergency takes place, your family members might not be at home. In case this happens, it may be a good idea to agree on a place outside the EPZ where everyone would meet, such as at a Reception Center or a friend’s or relative’s house outside the EPZ. You should also agree on a “check-in” phone number for the family—a friend or relative who lives outside the area code you’re in. Everyone would call this person to check in with him or her if an emergency occurred.

Our “check-in” phone number is _______________________________________________

If my family is separated in an emergency, we will meet at
   Place __________________________________________

What happens if there is an emergency and my children are in school?

Relocation of school children to School Reception Centers

An emergency could, of course, occur at any time of the day or night. It could happen during hours when your children are in school. County officials working closely with safety experts from New York State, other counties and school districts, have developed plans for relocating school children in an Indian Point emergency.

As a precautionary measure, officials plan to relocate students well in advance of a serious emergency. Relocating school children is not indicative that a radiological release has occurred, or is even likely to occur. In fact relocating school children does not mean an evacuation of the area has been ordered or is likely to be ordered. It is a precautionary action.

Students would be taken with their teachers by bus to School Reception Centers located outside the EPZ. Children would then be registered and will stay at the School Reception Center, under the care of their teachers, until parents are able to pick them up. If the need for food and extended shelter becomes necessary before parents arrive, children may be moved to a General Reception Center. In that case, they would remain in the care of teachers, and parents would be notified through the media.

School staff are trained annually on emergency relocation procedures. Parents should be confident that their children are safe and secure with the same staff that cares for them while in school.

Parental pick-up. Many schools have plans in place to allow parents to pick up their children before they are relocated to a School Reception Center. Check with the principal at your children’s schools to see if they have such plans.

If your child’s school is relocated

• If your children attend different schools they may be sent to different School Reception Centers located close to each other. Check the map to see where each of your children will be relocated to. Don’t worry if you can’t immediately pick up your children for any reason. They will be cared for at the School Reception Center or ultimately at a General Reception Center. Remember the relocation of school children will be done as a precautionary action well in advance of a real emergency at Indian Point.

• Please remember: School Reception Centers are not the same as General Reception Centers. Both types of centers are shown with their own separate symbols in the legend of the large detailed map in this booklet.

• School Reception Centers will be used only if students need to be relocated during school hours.

• If your child or children are in a day care, nursery school, after-school programs or other settings located within the EPZ, they are subject to the same emergency procedures as public and private schools. Check with their provider on emergency plans for their location.

IMPORTANT

• If parents would like to authorize another person to pick up their children—a grandparent or baby sitter, for example—they should contact their child’s school at their earliest convenience. They must follow that school’s procedures for formally identifying the person who would pick up their child.

Your children’s school and the corresponding School Reception Center is shown on the detailed map in this booklet. Officials will use TV and radio broadcasts to keep you informed about school relocations.

Locate your children’s School Reception Centers on the large detailed map in this booklet.

Enter this information here, and then on the Emergency Plan Summary, page 14.
Potassium Iodide, known by its chemical symbol KI, is an over-the-counter medication. In the event of a serious nuclear plant emergency, KI has safety value as a supplement to sheltering-in-place and evacuation. It reduces the risk of thyroid cancer from exposure to radioactive iodine. Radioactive iodine could be among the materials released in a severe emergency. KI protects only the thyroid gland from exposure to radioactive iodine. It does not protect any other part of your body, and it does not protect you from other forms of radiation.

One KI-potassium iodide tablet protects the thyroid gland from radioactive iodine for approximately 24 hours. It is most effective if taken immediately prior to exposure, as directed. However, thyroid protection can still be achieved by swallowing a KI-potassium iodide tablet up to six hours after radiation exposure.

Westchester County has KI available free of charge to people and places of business within the EPZ. The state Department of Education has also made KI available to schools within the EPZ. Most communities in the EPZ also have KI for distribution to the public before an emergency. Contact your local town, village or city hall, or call the Westchester County Department of Emergency Services to learn how to get KI to have on hand should an emergency occur.

If you previously received KI, check its expiration date. If expired, replace it.

Pre-Emergency KI Distribution Sites:
To have KI in hand as a precautionary measure, Potassium Iodide (KI) pills are available in the following municipal centers located within the 10-mile EPZ:

- **Village of Briarcliff**
  Municipal Building
  1111 Pleasantville Rd.
  Briarcliff Manor
  941-4800

- **Village of Croton-on-Hudson**
  Municipal Building
  1 Van Wyck St.
  Croton-on-Hudson
  271-4781

- **Town of New Castle**
  Town Clerk’s Office, Town Hall
  200 Greeley Ave., Chappaqua
  238-4771

- **Town and Village of Ossining**
  Community Center
  95 Broadway, Ossining
  941-3189

- **Town of Somers**
  Supervisors Office, Town Hall
  335 Route 202, Somers
  277-3637

- **City of Peekskill**
  Office of Emergency Management
  4 Nelson Avenue, Peekskill
  Call ahead, 862-1020/862-1424
  http://www.cityofpeekskill.com/police/potassium-iodide-ki-online-ordering

- **Town of Yorktown**
  Community and Cultural Center
  974 Commerce Street
  962-5758 or John Hart Library
  1130 Main Street
  245-5262

- **Westchester County**
  Department of Emergency Services
  Main Office
  4-Dana Road, Valhalla
  231-1850
When do I take KI-potassium iodide and how much do I swallow?

Public health authorities will advise the public through the media when they should take KI and what dose adults and children should swallow. Listen to your Emergency Alert Stations (EAS) for instructions about KI.

**Recommended Doses of KI for Different Risk Groups**

If you are told to swallow KI and evacuate, but you do not have KI, just evacuate. Do not go to the sites listed on the previous page. In an emergency, KI will be distributed at the southbound rest area off Interstate 684 located in the Town of Bedford and also at the Rockefeller State Park on Rt. 117 in Pocantico Hills. KI will also be available at your Reception Center.

Sources of Radiation Exposure in the United States

For more information, visit the website of the U.S. Nuclear Regulatory Commission: [www.nrc.gov](http://www.nrc.gov)

For any additional questions you may have please call your county’s emergency services office.
Other Emergency Information

Planning for people with special needs

If there is a need for an evacuation due to an emergency at Indian Point the County has plans in place to pick up and transport people, from the EPZ, with special needs who have no other means of transportation. Special needs could include a walking disability, sight or hearing impairment, or need for specialized medical equipment or transportation. People with special needs would be taken to Reception Centers or other facilities.

It should be noted that nursing homes, hospitals, hospices, etc., within the EPZ have included emergency procedures in their emergency plans. Staff are trained in these procedures to keep these people safe in the event of an emergency. Residents of such facilities would be transported to host facilities outside the EPZ.

The Voluntary Registry for People with Disabilities and Special Needs is a new program, developed by Westchester County, to identify those residents that may require additional assistance in a major emergency or disaster. To be eligible for inclusion on the Special Needs Registry the applicant must be a resident of Westchester County, living independently (not in a group home or medical facility), and have a physical or mental disability that would require emergency evacuation assistance and/or placement in a specialized shelter. Being on the Registry does not guarantee that any specialized services will be provided, and does not replace the need to dial 9-1-1 in an emergency.

Residents with special needs living in the Emergency Planning Zone who have previously registered for inclusion on the Westchester County list of Non-Institutionalized Mobility Impaired (NIMI); please note that the Special Needs Registry replaces this program. If you were previously registered for NIMI, you must now submit a new application to the Special Needs Registry.

To apply for the Special Needs Registry, or to learn more about the program:
- Dial 2-1-1 on your phone. You will be connected with a trained operator from the United Way 2-1-1 Call Center who can provide additional information and process the application on your behalf.
- Visit www.westchestergov.com/specialneeds, and complete an online application yourself, or with the assistance of a friend or family member.

Protecting your pets

If you are directed to evacuate, you will want to take your pets with you. However, pets will not be permitted inside public Reception Centers (except service animals such as seeing-eye dogs). Pet owners are encouraged to make a list of places that would accept their pets in an emergency, such as boarding kennels, or friends and relatives outside the EPZ. The county is working to develop limited emergency kennel space at the Westchester Community College. This is being done to accommodate people who cannot make other arrangements for their pets beforehand. For more information on disaster preparedness for your pets or livestock, visit The Humane Society of the United States Disaster Center website at; www.hsus.org/hsus_field/hsus_disaster_center/resources/.

### Different levels of incidents

There are four classifications of nuclear power plant incidents established by the federal government.

<table>
<thead>
<tr>
<th>Incident Classification</th>
<th>Definition</th>
<th>Siren Activation?</th>
<th>Public Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unusual Event</td>
<td>There is a potential problem with operation of the plant. No radiation leak is expected. Federal, state and county officials will be notified immediately.</td>
<td>Sirens unlikely to sound</td>
<td>Likely no action necessary. Information will be provided to news media.</td>
</tr>
<tr>
<td>Alert</td>
<td>Something has happened that could reduce the plant’s level of safety. A small leak of radiation could occur inside the plant not affecting the public.</td>
<td>Sirens may sound</td>
<td>Indian Point, the counties and the state emergency response centers are fully activated and coordinating their activities. Information will be provided to news media.</td>
</tr>
<tr>
<td>Site Area Emergency</td>
<td>A problem has substantially reduced the plant’s level of safety, but radioactivity levels outside the plant site are not expected to exceed federal guidelines.</td>
<td>Sirens will likely sound</td>
<td>Indian Point, the counties and the state emergency response centers are fully activated and coordinating their activities. You should monitor the situation on television or radio.</td>
</tr>
<tr>
<td>General Emergency</td>
<td>Problems affecting plant safety systems could lead to a release of radioactivity above federal guidelines outside the plant site.</td>
<td>Sirens will sound</td>
<td>Stay tuned to an Emergency Alert System radio or television station to find out if you need to take protective action, such as staying indoors or leaving the area.</td>
</tr>
</tbody>
</table>

### Incident levels could change

It’s important to know that an incident at a nuclear power plant could change over a period of hours or days. Plant operators and government emergency planners would be in constant communication with each other. Plant operators may decide to change the classification level of the incident, depending upon the changing situation. The public would be informed of any changes in the incident so it’s important to keep your radio or television on to get the latest news.

If you haven’t already done so, transfer all the information you entered in the numbered boxes to the Emergency Plan Summary on page 14.
Questions and Answers

How do government officials make decisions during an emergency at Indian Point?

State and county emergency planners, supported by hundreds of highly trained safety experts, police, firefighters and other first responders, have developed extensive procedures for an emergency that might occur at Indian Point.

If an emergency were to occur, the county executives in the four counties surrounding Indian Point (Westchester, Rockland, Putnam and Orange) would receive information directly from the nuclear plant, as well as from county and state emergency staff and New York State health officials. During an emergency, the county executives maintain continuous communication with each other and with state and federal officials.

Together, government officials would decide what protective actions, if any, the public should take. Their decisions and instructions would be communicated to the public through the Emergency Alert System (EAS) broadcasts as well as through other news media.

Why would we be directed to “shelter-in-place” in some situations and evacuate in others?

Shelter-in-place and evacuation are two possible protective actions that you may be instructed to take during an emergency. The goal of protective actions is to minimize the public’s exposure to a radiological release. Elected officials will decide what specific protective actions are best for the public to take. They consider a wide range of expert advice and information, including data on the amount and duration of the release, wind direction and weather conditions. The actions of sheltering-in-place or evacuation each have advantages depending upon the situation.

How could an evacuation succeed when traffic often doesn’t move even during rush hour?

If there is an emergency, there is likely to be heavy traffic leaving the area. Police and other emergency personnel are trained in traffic control—they will do what is needed to keep traffic moving in any emergency. In addition, traffic control points staffed by law enforcement personnel and fuel and towing services are planned along main evacuation routes to promote traffic flow.

Would all areas be evacuated at the same time?

In most instances, only people living in specific areas would be told to evacuate. Therefore, it is most important for people to follow directions from public officials carefully to ensure a successful evacuation.

Because of road conditions and population density, it is vital that people do not evacuate unless they are instructed. Unnecessary evacuation could cause greater congestion on the roads and put people in those areas that are being instructed to leave at risk.

What is radiation?

Radiation is energy, such as heat, light and radio waves, that moves at high speed through space or matter. One type of radiation is produced by so-called radioactive materials.

At every one of our country’s more than 100 nuclear power plants, every safety precaution is taken to isolate, shield and prevent radioactive materials from escaping to the environment.

How can we measure our exposure to radiation?

Radiation can be easily measured with various instruments, including Geiger counters. During emergencies, the county dispatches field teams with specialized equipment to measure radiation levels.

Can a nuclear power plant explode like a nuclear bomb?

No. Radioactive fuel in a nuclear plant has very low levels of the type of element that could cause a nuclear explosion.

All nuclear power plants in the U.S. are designed with containment buildings of concrete and steel. The 1986 accident at Chernobyl, Ukraine occurred in a nuclear plant that did not have a containment building.

How can I protect my livestock and agricultural products?

If you have livestock or agricultural products, useful information is available on the New York State Emergency Management Office’s website at: http://www.semo.state.ny.us or by calling 518-292-2311 and asking for the brochure “Radiological Emergency Information for the Agricultural Community.”

Will food and supplies be available for my pet?

Pet owners should plan to bring their own supplies, including food, leashes, cages and carriers etc. Trained volunteers will be available to assist owners with pet care and feeding. Please be mindful that space at Westchester Community College is limited, so we encourage everyone to make other plans for their pets before the emergency.
Evacuation Supplies Checklist

If you are told to evacuate, you should bring enough personal supplies for three days away from home. Check the items you may need, and add any special items that are not listed. If you need help finding a place to stay during an evacuation, people staffing the General Reception Centers will help you.

A MESSAGE FROM COUNTY EXECUTIVE ROBERT P. ASTORINO

Dear Westchester resident:

You’ll probably never need this booklet, but in Westchester County we believe it’s important to be prepared. We want you to know we have a comprehensive response plan that would be put in place if an emergency at Indian Point were ever to occur.

This emergency guide, specifically written for communities within 10 miles of the plant, answers many of the questions residents would have in the event of an emergency. The plan -- developed by emergency response professionals in cooperation with three other counties, New York State and Entergy (operators of Indian Point) -- provides information on everything from how you would know there is an emergency to what actions you might have to take.

If there ever is an emergency, you would be given instructions on what to do based on your municipality. However, it’s important to be informed and know upfront how you might be affected by the emergency procedures.

I hope you will read this booklet and keep it close at hand. Note that the center section is detachable for you to personalize for your own family and carry in your car, purse or briefcase to help you be even better prepared.

Sincerely,

Robert P. Astorino
Westchester County Executive
