

ABOUT 25 PERCENT OF THE POWER USED IN NEW YORK CITY AND WESTCHESTER, WITH VIRTUALLY NO EMISSIONS. NOW THAT'S RIGHT FOR NEW YORK.

You have a right to know that about a quarter of the electricity in New York City and Westchester is generated by the Indian Point Energy Center, with virtually no greenhouse gas emissions, and at lower cost than other sources in the region.

Indian Point's operations are constantly reviewed by **independent experts** at the Nuclear Regulatory Commission (NRC). We're also among the most thoroughly reviewed nuclear energy facilities in the U.S.

Indian Point has invested over a billion dollars to **upgrade and strengthen** all our operations in recent years. We have layers upon layers of safety and security systems, so there are back-ups to the back-ups. Every day, we plan and train to expect the unexpected.

An equivalent gas-fired power plant would emit millions of tons of pollutants a year into the **air we breathe**. And the independent experts in charge of New York's electric grid have said that the city could face rolling blackouts throughout the New York area without Indian Point.

All of us have a right to know why Indian Point is
Right For New York.
