

I LOVE THIS CITY. AND INDIAN POINT POWERS ABOUT 25 PERCENT OF EVERYTHING WE ALL LOVE ABOUT NEW YORK.

That's about 25 percent of New York City's and Westchester's electricity, produced with **virtually no greenhouse gas emissions**, and at lower cost than other sources.

The scientists and engineers who run Indian Point are continually making the plant **safer and safer**, so they can continue to provide more of the lower-cost, low-emission electricity New York needs to keep moving forward.

Indian Point has invested over a billion dollars to **upgrade and strengthen** all its operations in recent years. They have layer upon layer of security, so there are back ups to the back ups. And they train every day to expect the unexpected, then plan for it.

You also have a right to know that Indian Point's operations are constantly reviewed by **independent experts** at the Nuclear Regulatory Commission (NRC), and that it's among the most thoroughly reviewed nuclear energy facilities in the U.S.

All of us have a right to know why Indian Point is **Right For New York**.
