

Today, there's more common ground than controversy.

While in years past there's been some disagreement over the use of nuclear energy to meet New York's growing power demands, the world has changed. Today, more than ever, we're standing together – on common ground.

We all have a common concern for the environment. To improve air quality, reduce emissions. To produce energy without the greenhouse gases that cause global warming.

We all have a common concern about generating power that's not just affordable and reliable, but also has the stable, predictable prices that the local communities can count on. And, of course, a common desire to end our dependence on foreign energy.

Upon this common ground, the reputation of Indian Point Energy Center stands strong, as a safe, secure and vital power plant generating over 2000 megawatts of electricity. Enough to power the subways and suburban rail lines, as well as public schools, police departments, firehouses and government facilities throughout New York City, Westchester County and the surrounding region. Indeed, Entergy's Indian Point Energy Center has become a model for nuclear plants across the nation – receiving numerous operational, engineering and safety awards.

But, don't just take our word for it. In a 2006 report by the prestigious National Academy of Sciences, a panel of independent experts came to the objective conclusion that Indian Point is critical. Without it, there would be an increase in air pollution and an increase in the cost of electricity.

Our common ground is solid ground. Let's work together in a spirit of cooperation for a better today and brighter tomorrow. The Indian Point Energy Center and You!

WORKING TOGETHER, WE'RE A MAJOR SOURCE OF POWER.

Safe. Secure. Vital.

Indian Point Energy Center
