

STILL WORKING FOR YOU

UNTIL THE INDIAN POINT NUCLEAR PLANT POWERS DOWN IN 2021,
WE'LL CONTINUE PRODUCING ABOUT 25 PERCENT OF THE ELECTRICITY
FOR NEW YORK CITY AND WESTCHESTER COUNTY, WITH VIRTUALLY
NO GREENHOUSE GAS EMISSIONS.

The Indian Point Energy Center has been powering New York's downstate region for about 40 years. Today, many New Yorkers have questions about the plant's early and orderly shutdown — What will change? What will stay the same?

For the next few years, much will stay the same. Until 2021, we'll continue safely generating clean, reliable power round-the-clock for New York City and Westchester County. That power makes Indian Point the single largest source of clean electricity in New York State.

Safety will continue to be the top priority for everyone at the plant. Under Entergy's ownership, Indian Point has established a strong safety record that we're committed to maintaining. Until shutdown in 2021, Indian Point will remain fully staffed with our team of approximately 1,000 nuclear professionals. We will continue to invest in the facility, and independent full-time inspectors from the U.S. Nuclear Regulatory Commission will remain on-site to review operations.

Indian Point will continue to generate significant tax revenues and expenditures in the local economy. We'll also continue to play an important role in the wellbeing of our community through the contributions we provide to many charitable organizations in the region, as well as the thousands of hours our employees volunteer and donate to these important causes.

At Indian Point, we're still working for you, and it's our honor to operate one of New York's cleanest and most reliable sources of electricity. If you have questions, please visit us at [SafeSecureVital.com](https://www.SafeSecureVital.com)
